## COVER LETTER

Dear Sir/Madam.

I'm Wayne Mike and I'm a Junior Software Engineer. I love programming and I have committed most of my time to it. I'm fascinated by the power of development. I fancy a working environment where I would contribute by: making full use of the platform to think beyond the odds of expectations and out of the box.

coding passion-driven feature that present the best version of the idea in the form of life.

applying the best of intelligence towards building solutions that signature the company as no one else but the best.

coding with excitement and making the client part of the solution they are looking for.

trying by all means to be the best at being in a team player in a team.

working towards excellence and design that satisfies the desires of the client.

making sure I learn something from everyone in the talented team.

I would love to be in a team of intellectuals who are great at what they do ,it is only that kind of mentality and nothing less that I'd love to grasp at a workplace.

Last but not least I'm excited about being part of the team that build great products and where i can learn new languages.

**Yours faithfully,**

**Wayne M. Nyakabau.**
